

MOTIONLESS-IMAGE DISPLAY WITH AUTO-ADJUSTING LIGHT SYSTEM AND THE METHOD FOR FORMING THE SAME

5

ABSTRACT OF THE INVENTION

In this invention, the auto-adjusting light system comprises: a
10 inputting sub-circuit for inputting a setting value; a photosensitive
sub-circuit for catching variations of the light source in the background;
a controlling sub-circuit that is coupled with the inputting sub-circuit
and the photosensitive sub-circuit to receive the setting value and the
variation value and generate a controlling signal; a starting sub-circuit
15 that is coupled with the controlling sub-circuit to receive the controlling
signal and generate a starting voltage; a display that is coupled with the
starting sub-circuit to receive the starting voltage, so as to lighten the
display.
